

# FALL GROW OUT - PEAS

**Common name:** Pea (snap)

**Scientific name:** *Pisum sativum*

**Variety:**

**Seed source:**

**Year:**

**Planting directions:** Peas can be sown September to the end of November or February to April. Depth: 1". Require support. Plant: 2" apart. Do not thin. Rows: 18" apart. Peas thrive in cool weather.

**Plant description:** See packet for description.

## Seed Saving Instructions

1. Plant only variety of peas or plant the other variety at least 100 ft apart.
2. Let seeds dry on the plant.
3. Collect.
4. Save seeds from healthy true-to-type plants. (It's okay if they get a little funky when going to seed.)

## Returning:

1. Get labels and envelopes. You can go to [RichmondGrowsSeeds.org](http://RichmondGrowsSeeds.org) to "How to Use the Library" page to "Returning/Donating" section and click on the returning seeds sheet. If you download the form, you can type onto it.
2. Fill in the label with the information, except the "seed source" will be your name (optional). Include notes about the plant using the description information above. Remember that the people borrowing these seeds only have what is written on the envelope so the more information you can provide the better.
3. Since we are sharing the seeds with others it would be helpful to put the seeds into multiple envelopes.
4. You can bring them to the Community Seed Connection @ Chester Springs Library.
5. Record what you return on the back of your registration form.
